ADMINISTERING GALAXY

Galaxy is a scientific workflow platform that aims to make computation biology accessible to research scientists who do not have computer programming or systems administration experience. In this workshop, we will look at how to install and configure Galaxy on your laptop or local infrastructure. We will also look at how to configure your installation and cover some common administrative tasks. Some familiarity with Galaxy and how to use it is assumed.

SPEAKER :- DR.NUWAN GOONASEKERA

Research Fellow, Melbourne Bioinformatics & EMBL Australia Bioinformatics Resource, University of Melbourne

CONTENTS

HOW TO INSTALL GALAXY

BASIC ADMINISTRATION TASKS

TESTING YOUR INSTALLATION

INSTALLING TOOLS FROM THE TOOLSHED
